Meeting with Candice for the deliverable #2

Jiwoun's question / answers + misc. :

- Should I construct a backend program for the project?
It is required to finish the whole project within an allocated time span.

- Are there any recordings (files) for the emergency call(911-call) which can be used for training.
We can generate audio output with the script, which Candice had given at the presentation.

- Do you have the script for the whole process of the simulation.
The answer is included in the above answer.

- The simulation of the mobile phone environment (setting) is the most prioritized goal for this project.
- Positive reaction would be better
- French mode : They don't use French for firefighter
- We should be focused on the problem definition document; What should be the first.
