Subject: Brainstorming minute
Last Update: February 24, 2020
Members (Group E): Ali Husain, Jiwoiun Kim, Xia Hua

Just leave your ideas without any constraints:

Ali's Idea(s):
- It should provide instructions of various operations for e.g. how to report fire by going under which specific menu etc

- Could provide a variety of videos like how to prepare yourself in advance and and other evacuating techniques in case of fire

- Can have an option like "Deaf Emergency" for kids who are deaf or cannot speak

- A game related to fire causing incidents (which provides scenarios of what to do in case of fire) inside the app could also be a good idea in educating the children about fire safety or escape procedure.

Jiwoun's Idea(s):

- The interface should simulate a phone screen on a smartphone. Also, it should represent both iphone or android phone screen.

- Under or top of the screen somewhere, the procedure of the training is to be shown.

- English/French selection

- Scenario mode(automatically begins the procedure with guide to show the whole process)

- Try mode with arrows on the phone buttons; what button should be pushed(on phone screen)

- Using real 911 dispatch voices as the training

Xia's Idea(s):

- A handbook of guidering kids on how to escape and right things to do in a fire or daily life. Using the from of a story book

- A place for parents and other adults to communicate so they can get experience from others

- More picture and sounds less words , so that kids can focus

- Make games or missions more realistic .

- Using more symbols which kids are familiar with, such as cartoon characters , toys…

- Guiding Videos.

- Interactive game : Show a picture of a certain circumstance and let players choose the right answer from multiple choice.
